

QRS PNOMATION II

THE STANDARD IN PLAYER PIANO TECHNOLOGY

Backward and forward compatibility - Your player system should compliment the life of your piano. QRS makes sure there is a path to insure your piano 's player technology is as relevant today as it was when you purchased it.

No Boxes - Aesthetics are a huge factor in the purchase decision of any piano. Old out of date technology hanging on your piano diminishes your pianos value. QRS has always offered a means of avoiding "The Box". Now we have taken it a step further, full wireless control of the system.

Integrated Record* - PNOscan integration gives you the possibility of networked lessons, performances and recordings. It provides position feedback of the keys movements, improving accuracy and performance.

Integrated Sounds* - Perform, Practice, and Playback with MIDI sounds built in.

Simple to Use - Three ways to use your system

- Traditional Remote Control, insert music and push play - no networks, no iPods, no passwords...
- Wi-Fi enabled device - Interface is like a juke box in your hand, offers stealth updates, instant music purchases,, and easy playlist creation.
- Legacy controllers you currently own - big libraries of existing CDs are still good, continue to use the controls you are comfortable with.

Music Now** - No internet is necessary, no iTunes is required. All music is available instantly when you want it, by the song, album, or collection. Easily customized playlists will deliver the perfect atmosphere.

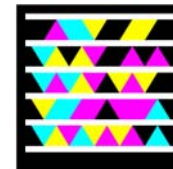

Full Control - Peace of mind that the software tools to enhance the PNOMation 's performance are in your hand.

* requires the integration of record technology similar to PNOscan; ** some copyright restrictions apply.

QRS PNOMATION II

THE STANDARD IN PLAYER PIANO TECHNOLOGY

1. Driver board ribbon cable connector – maintains compatability with older systems
2. Same footprint – easily swap out the existing with the new
3. MIDI In for record or playback
4. Headphone output and Mic Inputs Practice, sing along, PC audio out
5. Any web enabled device as a controller – access to your pianos features from anywhere.
6. PLx - Pin Light Extender: Tiny, simple, functional - bring ports, feedback, and buttons of the PMII processor to a convenient location
7. Soft Synth built in: allowing simple silent practice, and performances
8. Easy to understand interface with simple record and playback
9. PNOscan connections—Fewer boxes and cables under your piano
10. Power supply ribbon cable – insures compatability with older QRS players.
11. DB15 connection to older generation controllers – if you like your old controller you can continue to use it, and get the added benefit of the new.
12. SD Slot for Music
13. Activity Lights and Buttons—no PLx no problem
14. Stop, Play, Reset, Reboot Button
15. MIDI Out to other MIDI compatable devices and players

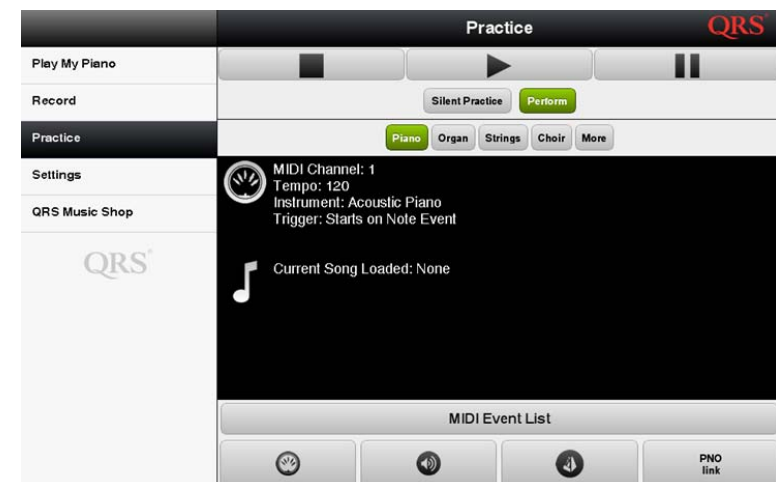

Playback couldn't be any more intuitive simply select the title and it plays

Simple record—push Record—then Stop—then Play to play your recording back

Your playback engine fine tuned

Simply select Practice or Perform—then an accompanying sound if you wish
